01 WHAT IS OXPAD?

Oxpad is a hybrid fundraiser fusing **marketing along an innovative borrow mechanism** to raise funds for startups, guarantee returns for investors, in addition to introducing the CBC standard and offering a suite of products including a fundraiser, swap, liquidity staking and a marketing accelerator.

02 LAUNCHPAD

Bringing you only the highest of quality, top tier crypto projects and known/ vetted teams. Simply access the pad by holding more than 1000 tokens in your wallet and stake ZXP to earn an allocation to invest. The system will work in a **Subscription model** with bigger allocations being offered to investors that stake more ZXP tokens.

Hard cap of a pool is 1000 BNB

Total ZXP staked 1, 000, 000 by 10 investors

Investor 1 - **500, 000 ZXP** = 500 BNB Allocation

Investor 1 - **250, 000 ZXP** = 250 BNB Allocation

Investor 1 - **125, 000 ZXP** = 125 BNB Allocation

Investor 1 - **85, 000 ZXP** = 85 BNB Allocation

Investor 1 - **40, 000 ZXP** = 40 BNB Allocation

These numbers will of course differ and are here to show the functioning of the investment model only and should not be taken as actual amount required for allocations. These will also vary for projects with **max contribution caps** accordingly.

03 SWAP

Our decentralized exchange (better known as a **DEX or AMM**) is a **peer-to-peer marketplace** where transactions occur directly between crypto traders. DEXs fulfill one of crypto's core possibilities: fostering financial transactions that aren't officiated by banks, brokers, payment processors, or any other kind of intermediary. The mathematical formula that sits at the core of the AMM is as follows:

Where, it represents the pool

- **X (Token 1)**
- **Y (Token 2) are the LP tokens e.g BNB,**

ZXP and k is the contrant balance between the tokens:

$$X * Y = k$$

04 LIQUIDITY

On AMM platforms, instead of trading between buyers and sellers, users trade against a pool of tokens — **a liquidity pool**. At its core, a liquidity pool is a shared pot of tokens. Users supply liquidity pools with tokens and the price of the tokens in the pool is determined by a mathematical formula stated above in the Swap section.

You can provide liquidity to different pools on our DEX much like on Pancakeswap and Uniswap to get returns of exclusive tokens launching on our DEX.

05 CBC

(Comprehensive Background check)

Our comprehensive background check (CBC) will introduce a new standard for a **KYC** where the whole team and project is evaluated and rated with a **score out of 100** much like a Audit report. With the introduction of the CBC standard we do the due dilligance so you dont have to.

Now you can easily participate in top tier projects and not have to think before aping an investment.

06 ACCELERATOR

Our Accelerator will allow for guaranteed returns fot the top stackers allocations, where high CBC scoring projects will be chosen to receive a full campaign funded by VCs to aid their presale. Many projects fail due to poor marketing and budget allocations.

With our **hybrid fundraiser** we leverage our connections to get **premium prices and offer a range of campaigns** at absurd discounts to make sure every project that launches with us does so with the **right marketing boost**.

07 ROADMAP

Q1 2023

- IDO Pad dApp (BSC, ETH)
- CBC Comp Background Check
- T2 CEX Listings

Q2 2023

- Accelerator Program
- T1 CEX Listings
- Airdrop user aquisition

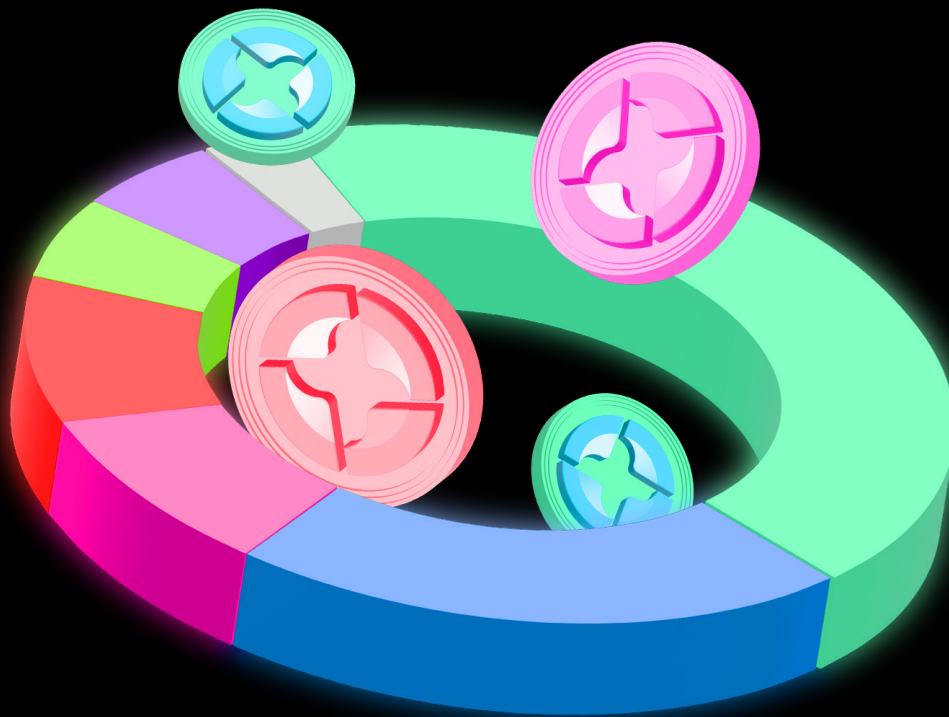

Q3 2023

- Multi-chain compatibility
- Partners and VC onboarding
- Degen Launchpad dApp

08 TOKENOMICS

	Presale	44%
	Liquidity	22%
	Shill2earn	10%
	Liquidity for 0x swap	9%
	CEX listing 1	6%
	CEX listing 2	6%
	Team	3%
